Set up Travis for Blog Repo

For 🔧 152 ✅ I figured out the basics of Travis in a toy sandbox project. Set it up

AC:

- PR's are built and build status goes to Github PR, but not deployed or pushed
- Builds of the master branch build a docker image which is pushed to Dockerh
- Builds of the master branch deploy to S3.

If possible, Slack notifications would be great, but that's somewhat contingent or encrypted creds.
